

ACKNOWLEDGEMENTS

I would first like to thank my family, for their continuous support throughout my time in graduate school. Thanks go out to my advisors, Dr. Lance Bosart and Dr. Dan Keyser. Their guidance during my time as a graduate student has allowed me to greatly mature as a scientist as well as a communicator of scientific information. Thanks go to my fellow graduate students for their ability to alleviate the stresses of graduate school. I would like to thank Jay Cordeira, Alan Srock, Nick Metz, Heather Archambeault, Tom Galarneau, Ben Moore, and Melissa Payer for their input, which greatly enhanced the quality of the research, and assistance with technical issues. I would like to thank Kevin Tyle for assisting with technical issues and Dave Vollaro for assisting with the lightning data. Thanks go to Stuart Hinson of the National Climatic Data Center for providing the storm reports dataset. I would also like to thank Patti Seguin and Barbara Zampella for their assistance in various administrative matters. Thanks goes out to Ross Lazear for being a fantastic friend and for his assistance in printing and submitting this thesis.

Lastly, I would like to thank John Quinlan and Tom Wasula of the Albany, NY, NWS forecast office for serving as the NWS focal points for this research under the Collaborative Science, Technology, and Applied Research (CSTAR) program. I would also like to thank Hugh Johnson and Kevin Lipton of the Albany, NY, NWS forecast office for providing their input and enthusiasm throughout my time working with them. This research was supported by the National Oceanic and Atmospheric Administration (NOAA) Grant NA07NWS4680001, awarded to the University at Albany, SUNY as part of the CSTAR program.
